Raw S4: nested peptide-grouped response diagnostic
Training-mean control
RMSE 1.180
Nominal load + site
RMSE 0.808
Load + site + sequence
RMSE 1.276
Held-out predicted log10 peak area
Observed log10 peak area
Observed log10 peak area
Observed log10 peak area
224 peptide × site summaries from 22 selected peptides • colors identify outer folds
RMSE weights each peptide equally; points are summaries, not independent source slots.
